

# The Enrollment Coalition

Despite the challenges stemming from lack of insurance, there were more than 25 million people who were uninsured in 2023, and most such individuals were eligible for, but not enrolled in, an existing health care plan or program.

The following table provides a state-by-state breakdown of the percentage of people under 65 that are uninsured, as well as the percentage of uninsured individuals who are eligible for Medicaid/CHIP or premium tax credits and income levels of uninsured individuals.
